Site Requirements

Space:

- Consultation for most appropriate configuration of space available.
- Drain in floor recommended.
- Floor load bearing capacity must be adequate. A full treadmill can weigh 6000kg.

Access:

- Space required 6.7 x 3m
- Minimum door opening of 1500mm required.

Electrical:

- Three-phase required (380/400V)
- Dedicated circuit breaker of min 50A in site DB.
- Power supply to our DB, positioned at the machine, should be installed by your electrician (4 core x 6mm cable minimum, depending on distance of power supply from the machine).
- As a safety feature, the system has its own earth leakage protection installed and cannot be connected to your existing earth leakage protector. Your electrician will install a separate isolator depending on
